

A random survey was taken to gather information about grade level and car ownership status of students at a school. This table shows the results of the survey. Write your answer as a reduced fraction.

Car Ownership by Grade			
	Owens a Car	Does Not Own a Car	TOTAL
Junior	6	10	16
Senior	12	8	20
TOTAL	18	18	36

$\frac{6}{18} = \frac{1}{3}$ 1. Find the probability that a randomly selected student will be a junior, given that the student owns a car. $P(\text{Junior} | \text{owns car})$

$\frac{12}{20} = \frac{3}{5}$ 2. Find the probability that a randomly selected student will own a car, given that the student is a senior. $P(\text{owns car} | \text{senior})$

The table below shows numbers of registered voters by age in the United States in 2004 based on the census. Find each probability in decimal form, 2 places.

Age	Registered Voters (in thousands)	Not Registered to Vote (in thousands)	Total
18-24	14,334	13,474	27,808
25-44	49,371	32,763	82,134
45-64	51,659	19,355	71,014
65 and over	26,706	8,033	34,739
Total	142,070	73,625	215,695

$.52$ 3. Find the probability that a randomly selected person is registered to vote, given that the person is between the ages of 18 and 24.

$$\frac{14,334}{27,808}$$

$.23$ 4. Find the probability that a randomly selected person is not registered to vote, given that they are 65 and over.

$$\frac{8033}{34,739}$$

$.09$ 5. Find the probability that a randomly selected person is between the ages of 45 and 64 and is not registered to vote.

not conditional $\frac{19355}{215,695}$

A faculty advisor at Ridge High School surveyed 100 students about their preference for a social event. Of the 100 students surveyed, 50 were tenth graders and 50 were eleventh graders. Of the tenth graders, 30 chose a bowling party and 20 chose a dance. Of the eleventh graders, 20 chose a bowling party and 30 chose a dance.

6. Make a two way frequency table to represent the data.

	Bowling (B)	Dance (D)	Total
10 th graders (T)	30	20	50
11 th graders (E)	20	30	50
Total	50	50	100

$\frac{1}{2}$ 7. Find P(B). Write your answer as a reduced fraction.

$\frac{3}{5}$ 8. Find P(B|T). Write your answer as a reduced fraction.

yes 9. Based on your answers on #7 & 8, do you think that the probability of liking bowling is dependent (different answers) on whether a student is in the 10th or 11th grade?

After growing tired of squinting while driving, Dwayne went shopping for a pair of sunglasses. He tried on glasses with different frames and lenses. He tried on 15 pairs of glasses, 8 that were cat eye frames and 7 that were browline frames. 2 of the cat eye frames were polarized lenses. He also tried on 10 regular lenses.

10. Make a two-way frequency table to represent the data.

	Polarized (P)	Regular (R)	
Cat Eye (C)	2	6	8
Browline (B)	3	4	7
	5	10	15

Marginal 11. Is the number 8 (cat eye frames) a joint or marginal frequency?

$\frac{3}{4}$ 12. What is the probability that a randomly selected pair of sunglasses has regular lenses, given that the pair of sunglasses has cat eye frames?

$P(\text{regular} | \text{cat eye}) = \frac{6}{8}$
